

A New Level of Performance!

240SS Power Unit

INNOVATIVE TECHNOLOGY

Typically a simultaneous power unit draws about 60 amps at inrush. The 240SS requires only about 5 amps to start up with virtually no inrush!

Circuit Control Panel

Optional Wireless Remote

- ➔ The design of the 240SS reduces the need for accessibility to the pump unit providing versatility when determining a location for the unit in your apparatus.
- ➔ Installs in approximately one day- minimizing installation costs.
- ➔ Retrofits on existing apparatus are a practical option

240SS Design & Operational Features

- ➔ Electric Power Unit, 240 volt single phase power
- ➔ Provides performance virtually the same as the AMKUS Ultimate System
- ➔ Two tools can be connected and operated simultaneously
- ➔ Can be used with hose lengths up to 200'
- ➔ DC fan cooled hydraulic heat exchanger
- ➔ Complete on-board circuit panel for: individual motor and circuit activation, LED circuit status display, LCD display for operational diagnostics, integrated low oil warning and low oil shut down
- ➔ Uses AMKUS non-toxic mineral base hydraulic fluid
- ➔ Optional wireless remote control with emergency shut down
